## How to Use This Schedule

This schedule is based on assumptions and generalizations. It excludes important factors like soil type and microclimate (sunny vs shady areas).

These are ranges for you to aim for and to make decisions about.

### The Low End of Each Range

The low end of each range assumes your system is in optimal condition. If it is newly installed or recently tuned up, use this end of the range.

### The High End of Each Range

The high end of each range assumes your system is in average condition. If it’s been a while since you did any work on your system, use this end of the range.

### Important:

If you currently water more than the high end of the range, slowly move your plants to this schedule.

### When To Add More Time

- If you live in a very windy area
- Your system is poorly maintained or has very high pressure (55+ psi)
- You have newly-installed plants that are not yet established
- If your plants are showing signs of water stress

### When To Subtract Time

- For mature desert-adapted trees
- In very shady areas
- If you currently water less than the low end of the range and your plants are happy—keep up the good work!

---

### Watering Guidelines

#### Low Water

- **Vegetables:** 3-4
- **Grass:** 5-7
- **Cacti & Succulents:** 10-15
- **Citrus & Vegetables:** 90-120

#### Medium Water

- **Vegetables:** 7-11
- **Grass:** 8-13
- **Cacti & Succulents:** 15
- **Citrus & Vegetables:** 120-155

#### High Water

- **Vegetables:** 11-17
- **Grass:** 14-21
- **Cacti & Succulents:** 24-35
- **Citrus & Vegetables:** 240-290
